Purpose/Policy:

Summer Foaming – PAA and F400

This purpose of this standard operating procedure is to assist with the summertime foaming regiment for lower ABV products we package with the CFT Filler and Seamer 3000/6.

Scope:

Can Line operators perform summertime foaming of the CFT Filler and Seamer 3000/6, including remedial PAA and F400 foaming, when packaging lower ABV products.

Definitions/Acronyms:

- SOP – Standard Operating Procedure
- PPE – Personal Protective Equipment
- PAA – Peroxyacetic Acid, sanitizer (Rochester Midland)
- F400 – Caustic cleaning solution (Rochester Midland)
- Perafoam – Foaming additive for PAA foaming (Rochester Midland)
- ABV – Alcohol by Volume
- RTD – Ready to Drink
- CFT Filler – The 32-valve rotary can filler (CFT Filler and Seamer 3000/6)
- Seamer – The 6-head unit that drops a lid onto each can and seals it

Authorities/Responsibilities:

This SOP can be completed by an entry level packaging operator after proper training from a senior member of the Can line packaging team. The objective of this SOP is to gain the knowledge needed to correctly identify which products need special foaming schedules and amounts.

Resources and Materials:

Operations:

- PAA Foamer.
- F400 Foamer.

Basic Cleaning:

- OxyStrike – Acid Sanitizer.
    - 100ml per 5 gallons of cold water.
    - For Remedial Cleaning – 600ml per 5 gallons of cold water.
- Perafoam – Foaming agent.
- F400 – Caustic based foaming agent.
    - 4oz per 5 gallons of warm water

- For Remedial Cleaning – 8oz per gallon of warm water.
  - Example: 40oz per 5 gallons of warm water.

Deep Clean:

- Can line Zone 3 Cleaning
  - N:\Operations\Production\Boston\Packaging\Canning Line\Canning 2025\Zone Cleaning 2025\Can Line Upper Level\Zone 3 - Filler AreaTroubleshooting:

PPE Required:

- Rubber Gloves.
- Safety Glasses.
- Face Shield.

Procedures:

When Extra Foaming/Other Processes are Required:

During the warm months (usually mid-May till mid-October) the brewery gets warmer and creates an environment in which bacteria like to grow. Our CFT Filler, Seamer and Conveyor belts are prime candidates for bacteria to live. Beers can be more susceptible to these bacteria for multiple reasons but one of the biggest reasons is a lower alcohol content.

When we package lower ABV products, we need to increase our foaming regiment. This SOP will go over which beers require extra foaming, what kind of foaming, and how often the foaming and other processes should be completed.

For products lower than 4.80% Alc. by Vol., we would foam during the following times with PAA and Perafoam:

Morning Start up:

- When we run our morning start up, we normally PAA foam as part of our morning startup procedure.
  - See CL05 – CFT Filler and Seamer 3000/6 SOP Document.

Every 3-4 hours during the run:

- During the run, about every 3-4 hours, we will pause the line (pack out filler starting at the Twist Rinser).
- We will then proceed to conduct our normal PAA foaming procedure inside and outside the Filler.

- We will then wait five minutes and rinse off all the foam.
- We can then proceed back to running the product.

Prior to running a low ABV beer (in between runs):

- If coming from a higher ABV product into a lower ABV product, we would then proceed to foam as follows
- Before pulling the lower ABV product, conduct our normal PAA foaming procedure inside and outside the Filler.
- We will then wait five minutes and rinse off all the foam.
- We can then pull the low ABV product.

When to Conduct a Remedial Cleaning:

During the hottest months, we can expect growth and when mixed with humidity, we need to do some heavier remedial cleaning. On mornings when we are starting up with a low ABV product (and the night before), we should plan on foaming our machines with a little higher chemical does for both PAA and F400 foaming.

Remedial PAA Foaming:

- We will conduct our normal morning startup foaming procedure as outlined in CLO5, but we will increase our PAA dose from 100ml (PAA) per 5 gallons of cold water to 600ml (PAA) per 5 gallons of cold water.

Remedial F400 Foaming:

- We will conduct our normal shutdown foaming procedure as outlined in CLO5, but we will increase our F400 doses from 4oz (F400) per 5 gallons of warm water to 40oz (F400) per 5 gallons of warm water.

Low ABV Products by Brand:

Harpoon:

- Harpoon Boston Irish Stout (BIS) 4.3%
- Harpoon Rec League (REC) 4.0%

UFO:

- All UFO Products except the following:
  - UFO White (UFW).
  - UFO Pumpkin Ale (PUFO).

Long Trail:

- Long Trail Blackbeary Wheat (LTBBW) 4.2%
- Long Trail Little Anomaly (LTLAN) 3.8%
- Long Trail Pollenator (LTPOL) 4.6%
- Long Trail Harvest Ale (LTHARV) 4.4%

Shed:

- N/A – Will update as needed

Otter Creek:

- N/A – Will update as needed

Catamount:

- N/A – Will update as needed

Clown Shoes:

- N/A – Will update as needed

Smuttynose:

- N/A – Will update as needed

Wachusett:

- Wachusett Blueberry (WABB) 4.5%
- Wachusett Blood Orange (WABO) 4.5%
- Wachusett WaJuicett (WAJU) 4.2%

Five Boroughs:

- Five Borough City Light (FBCL) 4.2%
- Five Borough Shandy (FBSH) 4.0%
- Five Borough Tiny Juicy (FBTJ) 4.2%

Dunkin RTD:

- N/A – Will update as needed

Contract and Other Products:

- Sea Dog Sunfish Wheat (SYSW) 4.6%
- Shipyard Winter Berry (SYWN) 4.6%
